

Network Access Control System

R9.0 Release Notes

1. Introduction

This document contains additional information for the R9.0 release of the Network Access Control System application software that is not found in the R7.0 documentation.

The following topics are covered:

- Supported platforms for Release R9.0
- The NAC release R9.0 features
- The NAC system R9.0 Upgrade
- Desktop PC
- JAVA Plug-ins for Netscape browser
- JAVA Runtime Environment

1.1. Trademark Acknowledgments.

CommKit, Datakit and StarKeeper are registered trademarks of Lucent Technologies, Inc. UNIX System is a registered trademark of UNIX System Laboratories, Inc.

- INFORMIX is a registered trademark of Informix Software, Inc.
- SecurID Authenticator is a registered trademark of Security Dynamics, Inc.
- Xitami is a trademark of iMatrix Corp
- HP-UX is a registered trademark of Hewlett-Packard Co.

2.0 Supported Platforms for release R9.0

2.1 HP 900 model D370 server

The HP 9000 model D370 server comes configured with 128 MB Memory, 2 internal 4GB FWD SCSI II Hot Swap disk drives and much more. The server is designed to grow with your current and future needs. It offers tremendous performances capability and expansion capability.

2.2 HP-UX 10.20

Release 10.20 of HP-UX is designed to provide added quality, performance and reliability for commercial and technical environments.

2.3 INFORMIX

This release of Informix runs with 10.20 of HP-UX. The releases of Informix both SQL and Online runs on the 10.20 version of HP-UX. It is required that NAC customers use above database releases with the HP-UX 10.20.

2.4 Commkit 3.20.02

This release of the EISA Datakit product runs on the 10.20 version of HP-UX. It is required that NAC customers with HP-UX 10.20 and a need to have a Datakit connectivity use the Commkit software.

2.5 Hardware

In order to run the NAC 9.0 release you will need at lease (2) 2 gig hard drives. The HP D370 server has been introduced as the new hardware platform in NAC 7.0 release that has two 4 GB hard drives.

If you are running the NAC release R7.0 on a HP-C110 machine with at least (2) 2 gig drives, you will just need to upgrade your software. If you are running on a HP 715/75 machine or HP 715/80 and only have (2) 1 gig drives, you must upgrade your hard drives to 2 gigs each.

3.0 R9.0 Features and Changes

For the description of R9.0 features please refer to the feature description document.

4.0 NAC System R9.0 Upgrade

Please see the Getting Started Guide for complete instructions on how to upgrade your NAC system to 9.0.

5.0 Desktop PC for Web Based access

It is recommended that the desktop PC should have the following:

- Pentium II 450 MHz processor or better
- 128 MB DRAM
- 100MB free Disk space
- Netscape Browser 4.5 or latest

6.0 JAVA Plug-ins for Netscape Browser

We have provided JAVA plug-ins with our product so that you don't have to download it from the [java/sun.com/products/plugin/index.html](http://java.sun.com/products/plugin/index.html). For test purposes we used the plug-in file `jre1_2_1-win.exe` for windows.

7.0 JAVA Runtime Environment

The JAVA runtime environment R1.1.8 for the HP-UX-UX release has been included with the product so that it simplifies initial setup. The version number of the runtime environment is C.01.18.00.
